

Medical Imaging AI Copilot

AI-Generated Preliminary Report — Research/Portfolio Prototype

This is AI-generated output, not a clinical diagnosis. Model probability is not clinical certainty. This system is a research/portfolio prototype and is not a substitute for a qualified healthcare professional's review.

Patient & Study Information

Patient ID	PT-2026-00124	Study ID	STU-2026-00089
Name	Jane Doe	Study Date	2026-08-20
Age / Sex	45 / Female	Modality	XRAY
Body Region	chest	Locations Analyzed	1

AI Vision Model Findings

Label	Model Probability
PNEUMONIA	99.98%

Grad-CAM Explainability

Highlights which image regions most influenced the model's prediction. It does not prove a disease is present and is not a diagnosis.

AI-Generated Preliminary Impression

The AI model flagged pneumonia with a high probability score of 0.9998348951339722. The model's output is based on statistical patterns learned from training data, but it is not a clinical diagnosis and does not account for a patient's symptoms, history, labs, or physical exam. The model's performance on this individual image may differ from its aggregate reported metrics, and other conditions can produce visually similar opacities.

Limitations

- A single chest X-ray, and a single model score, cannot confirm or rule out pneumonia on its own.
 - Other conditions (e.g., atelectasis, pulmonary edema, scarring) can produce visually similar opacities.
- LLM: ollama / llama3.2 · Grounded: True · Requires professional review: True
